\$1.70M

avg. off-plan price

\$1.01M

avg. secondary price

\$83.69K

avg. annual rent

8.25%

est. gross rental yield

Reported dashboard KPIs | Currency: USD | Values depend on report filters

OBJECTIVE & APPROACH

Build an integrated view of pricing, rental performance, off-plan premiums and location characteristics. Five source datasets feed a dimensional model and five interactive report pages, using **Power Query** preparation and reusable **DAX** measures for prices, rents, activity and yield.

4 fact tables**5** shared dimensions**14** active relationships**5** report pages**84****communities covered**
(expanded from 43)

Model QA win: Rebuilt the community dimension from the monthly area-price source, adding **41 communities** and eliminating unmatched blank categories. Single-direction relationships and a shared bedroom dimension provide consistent cross-table filtering.

KEY FINDINGS IN THE MODELLED DATASET

Off-plan pricing exceeds resale

Off-plan price per sq ft is reported above secondary-market levels. The PPSF premium is a separate measure from the average property-price KPIs above.

Property prices vary by segment

Average secondary-market price rises with bedroom count. Property type and size provide additional segmentation for interpreting price differences.

Luxury pricing differs from yield

Emirates Hills and **Bulgari Resort** occupy high-price/high-rent positions; the strongest estimated community yields occur elsewhere.

Accessibility varies by community

The Valley stands out for high metro travel time. It was retained as a location observation; travel time and landmark distance add comparison context.

RECOMMENDED ANALYTICAL PRIORITIES

- 01 Compare equivalent segments.** Review off-plan and secondary PPSF within the same community and property type; examine size and bedroom mix before interpreting premiums.
- 02 Screen yield alongside price and rent.** Use aggregate yield to guide further analysis; property-level matching and operating-cost data are needed to assess individual returns.
- 03 Preserve comparable time periods and filters.** Compare partial 2026 with the same prior-year period; retain complete community coverage and shared slicers across report pages.

Interpretation: Estimated gross yield = **(average annual rent ÷ average secondary price)** under the active filters; rental and resale properties are not individually matched. Coverage ends in April 2026; financing-rate analysis uses Apr 2020-Mar 2024. Approximately 36% of secondary floor fields are missing.
